

## Function: ???

Write the code out for the following function in Pascal or C. Then hand execute the code you have written.

Once you have done that, give a name for this function based on what you think it does.

### Details

#### Return Type

The function returns a **Integer** value.

#### Parameters

- **data**, an array of Integers
- **numb**, an Integer

and, if you decide to use C:

- **size**, an Integer

### Steps

1. Assign **result** to 0.
2. For each element in the array **data** check if the current value is equal to **numb**.
3. If so, increment **result**.

### Hand Execution Data

- **data** = [5, 24, 5, 5, 6, 7]
- **numb** = 5
- **size** = 6
