Function: ???

Write the code out for the following function in Pascal or C. Then hand execute
the code you have written.

Once you have done that, give a name for this function based on what you think
it does.

Details

Return Type

The function returns a **Integer** value.

Parameters

- **data**, an array of Integers

and, if you decide to use C:

- **size**, an Integer

Steps

1. For each element in the array **data**, add the current value to **result**

Hand Execution Data

- **data** = [2, 2, 4, 2]
- **size** = 4
